**FIRST SEMESTER AY 2019-2020**  
**ICT – Empowerment Technologies**

**I. Major of the Majors**

**II. Purpose**

- The purpose of this survey is to recognize the subject that is more preferred by grade 4 students. The researchers are also able to recognize the difficulty of each subject through the perspective of the respondents. The goal this survey is to measure the familiarity of the students regarding the topics under the 3 major subjects: English Math, and Science.

**III. Brief Description**

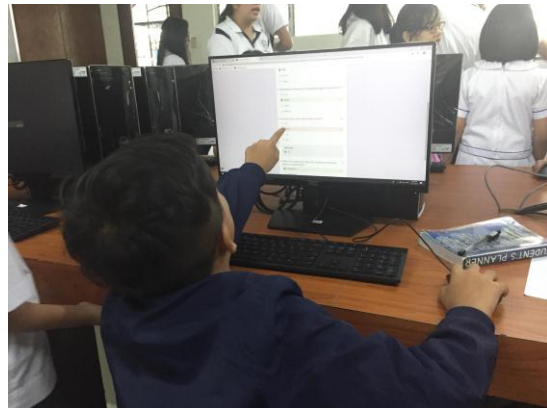

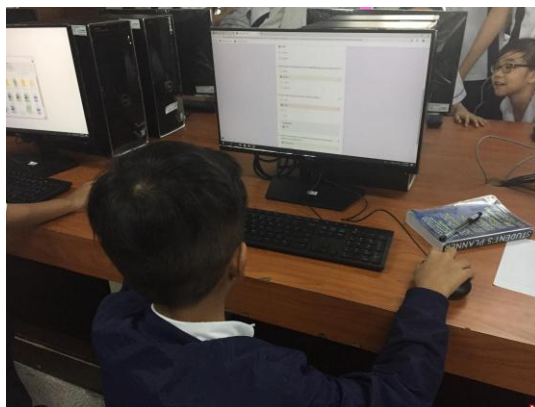

- We conducted this survey to measure the student's knowledge regarding the major subjects in school and to recognize which subjects they will excel in. We have provided questions under the 3 major subjects to test how broad their knowledge is concerning the following topics.

**IV. Difficulties Encountered**

- Throughout our survey, one of the difficulties that we have encountered was that some of the students had difficulty in understanding the given questions due to the fact that some of the questions were not yet tackled. Also, we could not get sufficient data because of a minimal number of respondents. We could not conclude which subjects they will excel.

**V. Conclusion**

- Based on the results 2 students chose Math, 2 chose English, and 1 student chose Science as the subject they are most interested in. As chosen by the 3 students, Math is the least subject that the students are interested in. Both Science, and English subjects are tied 1:1 as the subject they are least interested in. In conclusion the respondents are too minimal to further more enhance the study towards which of the major subjects are most, and least interested in.

**VI. Recommendation**

- We recommend to have a varied group of respondents and to have longer or more detailed questions when conducting a survey. Through this, we are able to gather various results and therefore, making it easier to conclude because of the diversity of respondents.
